Chem Sources International 1996 Based on the print reference books, Chem Sources USA and Chem Sources International, this database contains information about commercially available chemical products. It includes the products of more than 8,000 chemical firms spanning 135

countries. You are able to search in three main categories: the Chemical database, the Application database and the Supplier database. The Chemical database lists over 250,000 chemical compounds. More than 150,000 of these chemicals currently have CAS Registry Numbers and over 60,000 have formulas. There are three ways to search the chemical database: by chemical name, by CAS Registry Number or by formula. You can submit full or partial names. Search results can be further narrowed by geographic region. The Application database allows you to search for specific trade name products or search by application (category) heading. The Trade Name and Classified Sections list over 25,000 chemical trade names. The Supplier database gives all pertinent contact data necessary for making direct inquiries to each chemical firm. Each supplier record includes: company name, address, phone, fax, email & web address (if applicable) and any sales offices. Suppliers can be searched by company name.
