Environmental Science and Technology Frank R. Spellman 2017-09-15 The third edition of Environmental Science and Technology: Concepts and Applications is the first update since 2006. Designed for the student and the professional, this newly updated reference uses scientific laws, principles, models, and concepts to provide a basic foundation for understanding and evaluating the impact that chemicals and technology have on the environment. Building upon the success of previous edition, the third edition has been expanded and completely updated. A significant change can be found in the expansion and treatment of all subject areas. Extensive energy parameters have been added to the text along with a thorough discussion of non-renewable and renewable energy supplies and their potential impact on the environment. In addition, thought-provoking questions have been added at the end of each chapter. Finally, pictorial presentation has been enhanced by the addition of numerous photographs. Organization and Content:

Environmental Science and Technology: Concepts and Applications is divided into five parts and twenty-five chapters, and organized to provide an even and logical flow of concepts. It provides the student with a clear and thoughtful picture of this complex field. Part I provides the foundation for the underlying theme of this book—the connections between environmental science and technology. Part II develops the air quality principles basic to an understanding of air quality. Part III focuses on water quality, and the characteristics of water and water bodies, water sciences, water pollution, and water/wastewater treatment. Part IV deals with soil science and emphasizes soil as a natural resource, highlighting the many interactions between soil and other components of the ecosystem. Part V is devoted to showing how decisions regarding handling solid and hazardous waste have or can have profound impact on the environment and the three media discussed in this text: air, water, and soil. Finally, the epilogue looks at the state of the environment, past, present, and future. The emphasis in this brief unit is on mitigating present and future environmental concerns by incorporating technology into the remediation process—not by blaming technology for the problem.

Interlacing Water and Human Health Anjal Prakash 2012-02-09 An increasing recognition of the need to understand the complex systems in the health sector has raised the demand for an examination of water and health from a systemic perspective. Analyzing the various discourses on the subject, the volume revolves around this central question: What are the linkages between water and health in South Asia? The interlacing of water and health exists wherever human health is adversely affected, directly or indirectly, by changes in the quality and quantity of water. These adverse effects are linked with poverty, environment, and infrastructure in the overall socio-political and economic-developmental context. The book looks at the linkage between water and health in an integrated manner, and is not based on the 'absence of disease' syndrome. The curative, preventive, and adaptive aspects of the public-health problem have also been delved into. Among other areas, the articles deal with water and health with reference to water supply, sanitation, water pollution, natural disasters, urbanization, and industrialization. Armed with the latest research and case studies from South Asia, the book calls for a comprehensive understanding and better integration of water and health issues in the region. Interlacing Water and Human Health is the third volume in the Water in South Asia Series published by SAGE and South Asia Consortium for Interdisciplinary Water Resources Studies (SaciWATERs).

The Biodemography of Human Reproduction and Fertility Joseph Rodgers 2002-09-30 The book that you hold in your hands is the second in a series. The two titles in the series are the following: Genetic Influences on Human Fertility and Sexuality: Theoretical and Empirical Contributions from the Biological and Behavior Sciences Edited by Joseph Lee Rodgers, David C. Rowe, & Warren B. Miller Published by Kluwer Academic Press, 2000 The Biodemography of Human Reproduction and Fertility Edited by Joseph Lee Rodgers & Hans-Peter Kohler Published by Kluwer Academic Press, 2002 The series has published chapters by researchers who study human fertility, from a particular perspective: Biodemography. We welcome your interest and participation in this developing subfield. Or, perhaps, biodemography may be better referred to as a "superfield." Because biodemography so naturally crosses interdisciplinary boundaries, and because its application draws together researchers from disparate disciplines, it may well be more appropriate to consider that biodemography subsumes a number of other disciplines, rather than the other way around. In this preface, we will describe our own efforts and those of many others to promote and develop the study of human fertility, using methods, models, and theories from both biological and demographic domains. In December, 1997, 25 participants from three different countries gathered in Tucson, Arizona for a small conference with the title "Genetic Influences on Fertility-Related Processes." That conference represented a fascinating blending of research from two apparently separate domains.

Environmental Health Takemi Otsuki 2021-12-15 Environmental Health discusses environmental effects on human health. It examines heavy metal pollution, biological effects of arsenic (on reproductive health, especially), effects of soil organic carbon, chemical pollution of drinking water, climate change and vector-borne diseases, marine fuels, particulate matter, and the United Nations Sustainable Development Goals (SDGs).

Reproductive Health and the Environment P. Nicolopoulou-Stamati 2007-06-04 This book reviews recent trends and developments in the study of the impact that the environment has on human reproduction. It thoroughly examines these issues, using the most modern techniques and methods available, to analyze the manner in which both male and female fertility can be affected and assessed. Coverage examines such diverse factors as toxic environmental contaminants, air pollution, and exposure to medical drugs.

Beyond the Numbers Laurie Ann Mazur 2013-04-16 Beyond the Numbers presents a thought-provoking series of essays by leading authorities on issues of population and consumption. The essays both define the poles of debate and explore common ground beyond the polarized rhetoric. Specific chapters

consider each of the broad topics addressed at the International Conference on Population and Development held in September 1994 in Cairo, Egypt. The essays are supplemented by sidebars and short articles featuring more-impassioned voices that highlight issues of interest not fully explored in the overviews. As well as providing a sense of the difficulties involved in dealing with these issues, the essays make clear that constructive action is possible. Topics covered include: the interrelationships between population, economic growth, consumption, and development the history of population and family planning efforts gender equality and the empowerment of women reproductive rights, reproductive health, family planning, health and mortality

Tragic Failures Carl F. Cranor 2017-02-09 The world is awash in chemicals created by fellow citizens, but we know little to nothing about them.

Understanding whether even the most prevalent ones are toxic would take decades. Many people have tragically suffered serious diseases and premature death, including children during development. Why has this occurred? Many factors contribute, but two important ones are the laws permitting this and the manner in which science has been used to identify and assess whether or not products are toxic. Both are the outcome of legislative, corporate, and judicial choices. Congress created laws that in fact keep public health officials and the wider population in the dark about the toxicity of virtually all substances other than prescription drugs and pesticides. Facing considerable ignorance about toxic substances, impartially motivated scientists seeking to protect the public health are constrained by the natural pace of studies to reveal toxic effects. Corporate pressures on public health officials and scientific obstruction substantially heighten the barriers to protecting the public. When people have suffered serious as well as life-threatening diseases likely traceable to toxic substances, judicial errors barring relevant science in the personal injury (tort) law can and have frustrated redress of injustices. Under both public health law and the tort law, there are possibilities for improved approaches, provided public leaders make different and better choices. This book describes these issues and suggests how we could be better protected from myriad toxic substances in our midst.

Microbial Biodegradation and Bioremediation Surajit Das 2021-11-24 *Microbial Biodegradation and Bioremediation: Techniques and Case Studies for Environmental Pollution, Second Edition* describes the successful application of microbes and their derivatives for bioremediation of potentially toxic and relatively novel compounds in the environment. Our natural biodiversity and environment is in danger due to the release of continuously emerging potential pollutants by anthropogenic activities. Though many attempts have been made to eradicate and remediate these noxious elements, thousands of xenobiotics of relatively new entities emerge every day, thus worsening the situation. Primitive microorganisms are highly adaptable to toxic environments, and can reduce the load of toxic elements by their successful transformation and remediation. This completely updated new edition presents many new technologies and techniques and includes theoretical context and case studies in every chapter. *Microbial Biodegradation and Bioremediation: Techniques and Case Studies for Environmental Pollution, Second Edition* serves as a single-source reference and encompasses all categories of pollutants and their applications in a convenient, comprehensive format for researchers in environmental science and engineering, pollution, environmental microbiology, and biotechnology. Describes many novel approaches of microbial bioremediation including genetic engineering, metagenomics, microbial fuel cell technology, biosurfactants and biofilm-based bioremediation Introduces relatively new hazardous elements and their bioremediation practices including oil spills, military waste water, greenhouse gases, polythene wastes, and more Provides the most advanced techniques in the field of bioremediation, including insilico approach, microbes as pollution indicators, use of bioreactors, techniques of pollution monitoring, and more Completely updated and expanded to include topics and techniques such as genetically engineered bacteria, environmental health, nanoremediation, heavy metals, contaminant transport, and in situ and ex situ methods Includes theoretical context and case studies within each chapter

Life on the Brink Philip Cafaro 2012-12-01 *Life on the Brink* aspires to reignite a robust discussion of population issues among environmentalists, environmental studies scholars, policymakers, and the general public. Some of the leading voices in the American environmental movement restate the case that population growth is a major force behind many of our most serious ecological problems, including global climate change, habitat loss and species extinctions, air and water pollution, and food and water scarcity. As we surpass seven billion world inhabitants, contributors argue that ending population growth worldwide and in the United States is a moral imperative that deserves renewed commitment. Hailing from a range of disciplines and offering varied perspectives, these essays hold in common a commitment to sharing resources with other species and a willingness to consider what will be necessary to do so. In defense of nature and of a vibrant human future, contributors confront hard issues regarding contraception, abortion, immigration, and limits to growth that many environmentalists have become too timid or politically correct to address in recent years. Ending population growth will not happen easily. Creating genuinely sustainable societies requires major change to economic systems and ethical values coupled with clear thinking and hard work. *Life on the Brink* is an invitation to join the discussion about the great work of building a better future. Contributors: Albert Bartlett, Joseph Bish, Lester Brown, Tom Butler, Philip Cafaro, Martha Campbell, William R. Catton Jr., Eileen Crist, Anne Ehrlich, Paul Ehrlich, Robert Engelman, Dave Foreman, Amy Gulick, Ronnie Hawkins, Leon Kolankiewicz, Richard Lamm, Jeffrey McKee, Stephanie Mills, Roderick Nash, Tim Palmer, Charmayne Palomba, William Ryerson, Winthrop Staples III, Captain Paul Watson, Don Weeden, George Wuerthner.

A Pivotal Moment Laurie Ann Mazur 2009-10-16 Through a series of essays by leading demographers, environmentalists and reproductive health advocates, *A Pivotal Moment* offers a new perspective on the complex connection between population dynamics and environmental quality. It presents the latest research on the relationship between population growth

and climate change, ecosystem health and other environmental issues. It surveys the new demographic landscape—in which population growth rates have fallen, but human numbers continue to increase. It looks back at the lessons learned from half a century of population policy—and forward to propose twenty-first century population policies that are sustainable and just. A Pivotal Moment puts forth the concept of “population justice,” which is inspired by reproductive justice and environmental justice movements. Population justice holds that inequality is a root cause of both rapid population growth and environmental degradation. As the authors in this volume explain, to slow population growth and build a sustainable future, women and men need access to voluntary family planning and other reproductive health services. They need education and employment opportunities, especially for women. Population justice means tackling the deep inequities—both gender and economic—that are associated with rapid population growth and unsustainable resource consumption. Where family planning is available, where couples are confident their children will survive, where girls go to school, where young men and women have economic opportunity—there couples will have healthier and smaller families.

Veterans and Agent Orange National Academies of Sciences, Engineering, and Medicine 2019-01-20 From 1962 to 1971, the U.S. military sprayed herbicides over Vietnam to strip the thick jungle canopy that could conceal opposition forces, to destroy crops that those forces might depend on, and to clear tall grasses and bushes from the perimeters of US base camps and outlying fire-support bases. Mixtures of 2,4-dichlorophenoxyacetic acid (2,4-D), 2,4,5-trichlorophenoxyacetic acid (2,4,5-T), picloram, and cacodylic acid made up the bulk of the herbicides sprayed. The main chemical mixture sprayed was Agent Orange, a 50:50 mixture of 2,4-D and 2,4,5-T. At the time of the spraying, 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD), the most toxic form of dioxin, was an unintended contaminant generated during the production of 2,4,5-T and so was present in Agent Orange and some other formulations sprayed in Vietnam. Because of complaints from returning Vietnam veterans about their own health and that of their children combined with emerging toxicologic evidence of adverse effects of phenoxy herbicides and TCDD, the National Academies of Sciences, Engineering, and Medicine was asked to perform a comprehensive evaluation of scientific and medical information regarding the health effects of exposure to Agent Orange, other herbicides used in Vietnam, and the various components of those herbicides, including TCDD. Updated evaluations were conducted every two years to review newly available literature and draw conclusions from the overall evidence.

Veterans and Agent Orange: Update 11 (2018) examines peer-reviewed scientific reports concerning associations between various health outcomes and exposure to TCDD and other chemicals in the herbicides used in Vietnam that were published between September 30, 2014, and December 31, 2017, and integrates this information with the previously established evidence database.

The Crowded Greenhouse John Firor 2008-10-01 This book focuses on two critical global issues—rapid population growth and a human-induced climate change. John Firor and Judith Jacobsen summarize the current status of these two issues, show how they are related to one another, and prescribe steps that governments, economies, societies, and individuals can adopt to stabilize both population and climate. Firor and Jacobsen argue that two revolutions are necessary to achieve a stable population and freedom from human-induced climate change: a social revolution that improves equity, particularly the status of women, and a technical revolution that yields vastly greater efficiency in energy and materials use than we have today. They offer a vision that incorporates these changes, and they urge professionals and activists to work to achieve them, even in the face of great odds.

Integrative Women's Health Tieraona Low Dog 2015-10-29 Integrative Women's Health remains the only in-depth, broad-based reference on integrative women's health written for health professionals. It helps providers address not only women's reproductive health, but also conditions that manifest differently in women than in men, including cardiovascular disease, arthritis, HIV, depression, and cancer. The text presents the best evidence, in a clinically relevant manner, for the safe and effective use of herbs, vitamins, diet, and mind-body strategies alongside conventional medical treatments. As

leading educators in integrative medicine, editors Dr. Maizes and Dr. Low Dog demonstrate how clinicians can implement their recommendations in practice, going beyond practical care to examine how to motivate patients, enhance a health history, and understand the spiritual dimensions of healing. In managing the patient, alternative therapies are never seen as substitutes for mainstream medical care, but always "integrated" into the overall regimen, and always subjected to the best available evidence. New to this second edition are chapters on environmental medicine and women's reproduction, thyroid health, and lesbian health.

Environmental Science Daniel D. Chiras 2006 Completely updated, the seventh edition of 'Environmental Science' enlightens students on the fundamental causes of the current environmental crisis and offers ideas on how we, as a global community, can create a sustainable future.

Mein Kinderwunschratgeber Attilio D'Alberto Mein Fruchtbarkeitsratgeber stützt sich auf die neuesten wissenschaftlichen Erkenntnisse aus über 350 Forschungsstudien. Dieser Selbsthilferatgeber kombiniert moderne, faktenbasierte Forschungsergebnisse mit Theorien der traditionellen chinesischen Medizin und erklärt den Vorgang der natürlichen Befruchtung aussagekräftig und genau. Dieses Buch enthält viele detaillierte Informationen, mit denen Sie Ihre Chance, schwanger zu werden, deutlich verbessern können. Wenn Sie meine Ratschläge befolgen, können auch Sie auf natürliche Weise ein Kind bekommen, wie Tausende von Paaren, die ich behandelt habe. Meine Erfahrung™ in der Behandlung verschiedener Arten von Unfruchtbarkeit, hat mir gelehrt, dass die Betroffenen oftmals viel detailliertere Informationen benötigen, als sie in herkömmlichen Büchern zum Thema Fruchtbarkeit finden können. Ich habe deshalb versucht, so viele Informationen wie möglich in meinen Ratgeber aufzunehmen und diese auf prägnante und leicht verständliche Weise zu vermitteln. Mein Fruchtbarkeitsratgeber erläutert den Menstruationszyklus und erklärt, wann der Eisprung stattfindet, wie sich die fruchtbarsten Tage bestimmen lassen und wann der günstigste Moment für eine Befruchtung ist. Er befasst sich auch mit den verschiedenen Ursachen für männliche und weibliche Unfruchtbarkeit, beispielsweise hervorgerufen durch Chemikalien in der Umwelt, Nahrungsmittel, Kosmetik oder Haushaltsprodukte, Umweltverschmutzung, Plastik, Schwermetalle, Arzneimittel oder elektromagnetische Wellen (EMWs), und zeigt Möglichkeiten auf, wie diese beseitigt werden können. Basierend auf den neuesten Forschungsergebnissen und bewährten Theorien der traditionellen chinesischen Medizin, gibt das Buch detaillierte Anweisungen zur Optimierung Ihres Lebensstils, besonders zu Themen wie Sport, Arbeit und Schlaf, Kleidung und Schuhe sowie Nutzung von Badewanne oder Dusche. Es erläutert das Prinzip körperlicher Ungleichgewichte der chinesischen Medizin und erklärt, wie Sie Ihre eigenen erkennen und ausgleichen können, um Ihre Fruchtbarkeit zu erhöhen. Der Ratgeber enthält Ernährungspläne für die Phasen vor und nach dem Eisprung zur Erhöhung des Hormonspiegels (Körner-Kur) und der Chancen auf eine Befruchtung. Außerdem werden viele weitere auf Forschungsergebnissen basierende Tipps gegeben, wie sowohl die männliche als auch die weibliche Fruchtbarkeit gesteigert, der Hormonspiegel reguliert und die Qualität von Eizellen und Spermien verbessert werden kann, um das

Fruchtbarkeitspotential zu erhöhen. Basierend auf den jüngsten wissenschaftlichen Erkenntnissen, erklärt Mein Fruchtbarkeitsratgeber wie Fruchtbarkeitsprobleme, z.B. ein unregelmäßiger Menstruationszyklus, ungeklärte Unfruchtbarkeit, schwankende FSH-Werte, schlechte Eizellqualität (niedrige AMH-Werte), Endometriose, PCOS oder schlechte Morphologie und Beweglichkeit von Spermien behandelt werden. Unter Bezugnahme auf Forschungsberichte über die positiven Effekte von Akupunktur und der chinesischen Kräutermedizin, werden Tipps zur Unterstützung der natürlichen Befruchtung gegeben. Darüber hinaus wird auf westliche Behandlungsmethoden von Fruchtbarkeitsproblemen, wie beispielsweise mit Clomid (Clomifen) oder durch intra-uterine Insemination (IUI), eingegangen. Dr (TCM) Attilio D'Alberto behandelt seit 2004 unfruchtbare Paare, angefangen bei solchen mit einfachen bis hin zu solchen mit komplexen Fruchtbarkeitsproblemen. Sein breites Wissen in diesem Bereich gibt er in seinem Buch Mein Fruchtbarkeitsratgeber weiter. Dieses Buch bietet einen reichen Fundus an Informationen, die für alle Paare mit Kinderwunsch von großem Nutzen sind. Als Taschenbuch, Kindle-Inhalt und Hörbuch erhältlich. Auch in französischer und deutscher Übersetzung erhältlich. „Mein Mann und ich haben sechs Jahre lang versucht, ein Kind zu bekommen... Wir haben mit Akupunktur begonnen und unsere Ernährung umgestellt... Zu meiner Überraschung habe ich dann nach sechs Wochen festgestellt, dass ich schwanger war.“ - Dr (TCM) Attilio D'Alberto - Bachelor of Medicine (Peking), BSc (Hons) TCM

Human Reproductive Ecology Kenneth L. Campbell 1994 The recent and historically unique low level of fertility in industrialised nations poses a number of important medical questions, arising because reproductive physiology did not evolve to function optimally in this modern environment. In some non-industrialised regions, such as sub-Saharan Africa, persistent high fertility and rapid population growth are associated with environmental deterioration. How do fecundity and fertility respond to such degradations? Do improvements of industrial environments or nutrition and health measurably alter fertility or fecundity? These are some of the issues explored in this volume, which contains contributions from anthropologists, demographers, reproductive biologists and epidemiologists.

A Pivotal Moment Laurie Ann Mazur 2010 With contributions by leading demographers, environmentalists, and reproductive health advocates, A Pivotal Moment offers a new perspective on the complex connection between population dynamics and environmental quality. It presents the latest research on the relationship between population growth and climate change, ecosystem health, and other environmental issues. It surveys the new demographic landscape—in which population growth rates have fallen, but human numbers continue to increase. It looks back at the lessons of the last half century while looking forward to population policies that are sustainable and just. A Pivotal Moment embraces the concept of “population justice,” which holds that inequality is a root cause of both rapid population growth and environmental degradation. By addressing inequality—both gender and economic—we can reduce growth rates and build a sustainable future.

Markets and Malthus Mohan Rao 2010-09-09 Markets and Malthus: Population, Gender, and Health in Neo-liberal Times explores the ideas and institutions that were framed at the 1994 United Nations population conference in Cairo and traces their trajectories sixteen years down the line. Why were Third World feminists profoundly critical of the Cairo consensus and process? How has the health of people around the world been affected by neo-liberal economic policies? What have these meant for women's rights, including reproductive rights? The book presents detailed case studies from various countries ranging from India and China, to Egypt, Tanzania, Uganda, and across Africa to Argentina, Peru, and throughout Latin America, as well as overarching themed essays. From the politics of abortion and immigration to rising levels of fundamentalist violence and sex selective abortions, the volume explores a range of issues from several vantage points. It offers startling new insights into these issues by linking them to neo-liberal economic policies that have profoundly shaped health policies globally. This book is essential reading for students of gender studies, public health, and demography, as well as policy-makers and activists.

Male Reproductive Health Wei Wu 2020-03-04 Male reproductive health is an important area affecting men's overall health and well-being. Infertility is a worldwide problem that affects approximately 15% of married couples. Half of these cases can be traced to male partners. Infertile men are at an elevated risk of cancer development later in life, primarily genitourinary malignancies such as testicular and prostate cancer. This book will focus on male reproductive health, from the aspects of semen quality, male infertility, testicular cancer, and prostate cancer, and their detection, diagnosis, treatment, and prevention.

Count Down Shanna H. Swan 2021-02-23 In the tradition of Silent Spring and The Sixth Extinction, an urgent, meticulously researched, and groundbreaking book about the ways in which chemicals in the modern environment are changing—and endangering—human sexuality and fertility on the grandest scale, from renowned epidemiologist Shanna Swan. In 2017, author Shanna Swan and her team of researchers completed a major study. They found that over the past four decades, sperm levels among men in Western countries have dropped by more than 50 percent. They came to this conclusion after examining 185 studies involving close to 45,000 healthy men. The result sent shockwaves around the globe—but the story didn't end there. It turns out our sexual development is changing in broader ways, for both men and women and even other species, and that the modern world is on pace to become an infertile one. How and why could this happen? What is hijacking our fertility and our health? Count Down unpacks these questions, revealing what Swan and other researchers have learned about how both lifestyle and chemical exposures are affecting our fertility, sexual development—potentially including the increase in gender fluidity—and general health as a species. Engagingly explaining the science and repercussions of these worldwide threats and providing simple and practical guidelines for effectively avoiding chemical goods (from water bottles to shaving cream) both as individuals and societies, Count Down is at once an urgent wake-up call, an illuminating read, and a vital tool for the protection of our future.

Endocrine Disrupting Chemicals R M Harrison 2007-10-31 Long-term environmental effects of chemical exposure have long been of concern and, more recently, chemicals which cause changes to the sexual development of exposed organisms have been identified. It is thought that low-level exposure to a wide range of chemicals may be affecting endocrine function, leading to a reduction in fertility and an increase in reproductive cancers. Endocrine Disrupting Chemicals reviews the scientific evidence and attempts to put the subject into context. Along with an overview of the issue, there is discussion of the specialised aspects in relation to wildlife; environmental oestrogens and male reproduction; and naturally occurring oestrogenic substances. With contributions from representatives of the Medical Research Council's Institute for Environment and Health and the US Environmental Protection Agency, the articles provide a comprehensive and detailed review of current issues. This book will be of interest to a wide readership, including industrial and environmental scientists, managers and policy makers.

Environmental Sociology Leslie King 2009 Environmental Sociology, intended for use in Environmental Sociology courses, uses sociological methods and perspectives to analyze key environmental issues. The reader is organized like an introduction to sociology reader, and comprised of readings that are accessible to and interesting for undergraduates.
